

Hanz Eduardo De Dios

657-712-2746 | ed.ddios0210@gmail.com | linkedin.com/in/hanz-eduardo-de-dios/ | github.com/hanzeduardodedios1

EDUCATION

California State University, Fullerton

Bachelors in Science, Computer Science | Lead Student Developer

Fullerton, CA

Expected May 2028

RELEVANT COURSEWORK

Data Structures, Object-Oriented Programming, Computer Org & Assembly, Linear Algebra, Multivariable Calculus

TECHNICAL SKILLS

Languages: C/C++ (Bare-metal), Python, x86 Assembly, SQL, TypeScript, Dart

Hardware & Embedded: Microcontrollers, Arduino CNC Shields, Stepper Motors, Direct-Drive Mechatronics

Validation & Infrastructure: Pytest, Observability, FastAPI, Flutter Web, Automated Regression Suites

Tools & DevOps: Git, GitHub Actions, Docker, DigitalOcean, CI/CD Pipelines

EXPERIENCE & LEADERSHIP

CSUF Computer Science Club (ACM)

Aug. 2025 – Present

Development Board Officer

Fullerton, CA

- Co-directed a 4-person Development Board within a 50-officer hierarchy, orchestrating weekly workshops for a 2,300-member organization.
- Architected technical curriculum covering CI/CD DevOps, Git collaboration, backend API architecture, and deployment via NPM.
- Instructed members in JavaScript, Python, clean code debugging, and web accessibility (SEO) to accelerate hackathon readiness.

Code Ninjas

May 2026 – Present

Technical Coding Instructor (Sensei)

Anaheim, CA

- Instructed 50+ students in systems logic, conducting live code reviews to resolve memory and event-driven runtime bugs.
- Engineered Python automation scripts for administrative workflows, eliminating 15+ hours of manual data entry weekly.

Anaheim Union High School District

June 2023 – Aug. 2023

Information Technology Automation Intern

Anaheim, CA

- Developed Python scripts to streamline remote software deployments and automated maintenance across 8+ campuses.
- Diagnosed complex network bottlenecks with senior engineers, optimizing hardware provisioning for 1,000+ clients.

PROJECTS

Project: Jarvis | *C/C++, Microcontrollers, Firmware & State Machines*

Apr. 2026 – Present

- Architecting a direct-drive robotic arm, bridging PCBA hardware with bare-metal C/C++ control logic.
- Engineered microcontroller logic via Arduino CNC shields, managing 6-axis stepper motors with sub-millimeter precision.
- Optimized memory allocation and executed hardware-in-the-loop validation, reducing physical actuation latency by 40ms.

PicTalk Microservice API | *FastAPI, Python, Automated Diagnostics*

Mar. 2026 – Apr. 2026

- Architected a Python FastAPI microservice integrating observability tracing to ingest and compress cloud payloads.
- Developed a pytest suite with mock endpoints, handling 10,000+ concurrent requests during automated regression testing.
- Engineered a CI/CD pipeline to push validated code to production servers, achieving sub-200ms API response times.

Disneyland Transit & Economic Engine | *FastAPI, Docker, Flutter Web*

May 2026 – June 2026

- Architected a Dockerized FastAPI proxy server, implementing IP-based rate limiting to secure Google Maps API keys and process live transit data.
- Engineered a custom cloud routing configuration within a DigitalOcean monorepo, eliminating CORS vulnerabilities and maintaining CI/CD pipelines.
